

ABSTRACT OF THE DISCLOSURES

An improved structure for the endpiece of tape rule, said endpiece comprises a squeeze mechanism and a fixing plate perpendicular to said squeeze mechanism; wherein the rear portion of said fixing plate is riveted with the measuring tape, its front end is formed together with a perpendicular inserting plate, said inserting plate is inserted into a central mounting plate; by using a pivot to connect said inserting plate with a clamping plate in said squeeze mechanism, said squeeze mechanism would be rotated and its position would be changed, such that it is adapted for measuring an object from different positions.
